EDUCATION

Cornell University (GPA: 3.9/4.0)

Ithaca, NY

Bachelor of Science in Biometry and Statistics - (Data Science Track); Minor: Computer Science, Business

May 2025 – Expected June 2028

Courses: Linear Algebra for Data Science, Object-Oriented Programming & Data Structure, Practical Tools for Machine Learning, Probability

University of Virginia (GPA: 4.0/4.0)

Charlottesville, VA

Bachelor of Science – Data Science + Mathematics (Probability and Statistics)

August 2024 - May 2025

PROFESSIONAL EXPERIENCE

ByteDance – TRAE, AI Coding IDE

Beijing, China

Product Operations Intern

June 2026 – present

- Developed 30+ scenario-based tutorials that translated complex AI coding workflows into scalable, easy-to-use solutions for enterprise users.
- Collaborated with product, engineering, and go-to-market teams to synthesize user research and competitive analysis into recommendations for product strategy, onboarding, and feature prioritization.
- Managed projects from requirements gathering through delivery and iteration, contributing to an approximately 20% improvement in customer satisfaction.

Quantum Financial Advisor

Rockville, MD

Data Science Intern

February 2026 – May 2026

- Built reusable SQL and Python workflows to query, clean, join, and structure complex financial datasets for analytical modeling and reporting.
- Developed Tableau dashboards and Python visualizations to evaluate portfolio and risk-adjusted returns, generating client-focused insights.
- Partnered with financial advisors to translate ambiguous business questions into reproducible data analyses and clearly documented solutions.

EY

Shanghai, China

Data Analytics Intern

July 2025 – August 2025

- Automated batch validation of multi-company financial statements using Python, Pandas, column mapping, and data joins, reducing manual reconciliation by approximately four hours per week.
- Identified data-quality issues and conducted variance analyses across revenue, expenses, and receivables, communicating findings to auditors, managers, and cross-functional stakeholders.

RESEARCH EXPERIENCE

Michael Charles Lab

Ithaca, NY

Undergraduate Researcher

September 2025 – Present

- Build end-to-end data pipelines that clean, merge, and validate large climate and agricultural datasets for predictive modeling.
- Develop regression and scenario-based models in Python to evaluate how weather patterns and agricultural inputs affect crop yields, using forecast evaluation and sensitivity analysis.
- Design reproducible workflows and communicate model assumptions and results through documentation, visualizations, and presentations to faculty collaborators.

PROJECT & ACTIVITIES

AI-Powered Restaurant Operations Mini App

Shanghai, China

Personal Project

June 2026

- Built and deployed an end-to-end restaurant operations app integrating LLM agents to automate reservations, order intake, and customer inquiries through a unified workflow.
- Translated staff and customer research into a PRD and prioritized iterative feature releases using AI-assisted development, increasing table utilization by approximately 20% and reducing operating costs by approximately 10% in July versus the January–June monthly average.

Cornell Data Journal

Ithaca, NY

Project Lead

October 2025 - Present

- Led a four-person team and built an end-to-end Python data pipeline combining BeautifulSoup web scraping, AI-assisted extraction, and data cleaning to analyze more than 3,000 UFC fight records.
- Developed analytical models, coordinated project milestones, and published findings through visualizations and methodological explanations; the article received more than 8,000 views..

JD Books Customer & Revenue Analytics (E-Commerce)

Ithaca, NY

Personal-Project

- Analyzed more than 50,000 e-commerce orders using Pandas to evaluate customer, regional, product, and promotional purchasing patterns.
- Identified differences in promotion sensitivity and customer spending between physical books and eBooks, translating complex transaction data into business recommendations.

SKILLS

Programming: Python, SQL, Java, R, MATLAB

Data Science and Machine Learning: Pandas, NumPy, Scikit-learn, PyTorch, XGBoost, predictive modeling, regression, classification, clustering, NLP, time-series forecasting, A/B testing

Data Engineering and Software: ETL pipelines, data modeling, large datasets, batch processing, real-time decisioning, data validation, APIs, OAuth 2.0, object-oriented programming, data structures, Git, Agile

Tools: Tableau, Power BI, Excel, MySQL, Snowflake, Jupyter Notebook, AWS Redshift, AWS S3, GCP, Azure
