EDUCATION

Cornell University (GPA: 3.9/4.0)

Ithaca, NY

Bachelor of Science in Biometry and Statistics (Data Science Track); Minors: Computer Science, Business

May 2025 – Expected June 2028

Relevant Coursework: Probability, Linear Algebra for Data Science, Practical Tools for Machine Learning, Object-Oriented Programming & Data Structures

University of Virginia (GPA: 4.0/4.0)

Charlottesville, VA

Bachelor of Science – Data Science + Mathematics (Probability and Statistics)

August 2024 - May 2025

PROFESSIONAL EXPERIENCE

ByteDance – TRAE, AI Coding IDE

Beijing, China

Product Operations Intern

June 2026 – Present

- Developed 30+ scenario-based tutorials that translated complex AI coding workflows into scalable solutions for enterprise users.
- Synthesized user research and competitive analysis with product, engineering, and go-to-market teams to recommend product strategy, onboarding, and feature priorities.
- Managed projects from requirements gathering through delivery and iteration, contributing to an approximately 20% improvement in customer satisfaction.

Quantum Financial Advisor

Rockville, MD

Data Science Intern

February 2026 – Present

- Built reusable SQL and Python workflows to query, clean, join, and structure complex financial datasets for analytical modeling and reporting.
- Created Tableau dashboards and Python visualizations to analyze portfolio and risk-adjusted returns and deliver actionable, client-ready insights.
- Partnered with financial advisors to define ambiguous business questions, deliver reproducible analyses, and document results for decision-making.

EY

Shanghai, China

Data Analytics Intern

July 2025 – August 2025

- Automated batch validation of multi-company financial statements with Python, Pandas, column mapping, and data joins, reducing manual reconciliation by approximately four hours per week.
- Performed data-quality and variance analyses across revenue, expenses, and receivables; communicated findings to auditors, managers, and cross-functional stakeholders.

RESEARCH EXPERIENCE

Michael Charles Lab

Ithaca, NY

Undergraduate Researcher

September 2025 – Present

- Build end-to-end data pipelines to clean, merge, and validate large climate and agricultural datasets for predictive modeling.
- Develop regression and scenario-based models in Python to evaluate how weather patterns and agricultural inputs affect crop yields using forecast evaluation and sensitivity analysis.
- Translate model assumptions and results into reproducible documentation, visualizations, and presentations for faculty collaborators.

ANALYTICS PROJECTS & LEADERSHIP

AI-Powered Restaurant Operations Mini App

Shanghai, China

Personal Project

June 2026

- Built and deployed an end-to-end application integrating LLM agents to automate reservations, order intake, and customer inquiries.
- Converted staff and customer research into a PRD and iterative feature roadmap; increased table utilization approximately 20% and reduced operating costs approximately 10% in July versus the January–June monthly average.

Cornell Data Journal

Ithaca, NY

Project Lead

October 2025 – Present

- Led a four-person team in building a Python data pipeline combining web scraping, AI-assisted extraction, and data cleaning to analyze 3,000+ UFC fight records.
- Developed analytical models and visualizations, managed project milestones, and published methodological findings viewed 8,000+ times.

JD Books Customer & Revenue Analytics (E-Commerce)

Ithaca, NY

Personal Project

- Analyzed 50,000+ e-commerce orders with Pandas to identify customer, regional, product, and promotional purchasing trends.
- Compared promotion sensitivity and spending across physical books and eBooks, translating transaction data into business recommendations.

SKILLS

Programming & Analytics: Python (Pandas, NumPy, Scikit-learn, PyTorch, XGBoost), SQL, R, Java, MATLAB

Modeling & Statistics: Predictive modeling, regression, time-series forecasting, classification, clustering, NLP, A/B testing

Business Intelligence & Data: Power BI, Tableau, Excel, MySQL, Snowflake, data modeling, ETL pipelines, data validation

Cloud & Development: AWS Redshift, AWS S3, GCP, Azure, Git, Agile, APIs, OAuth 2.0, object-oriented programming
